Editor of SOVIET PHYSICS–JETP:
J. GEORGE ADASHKO, 25 WEST 81ST ST., N.Y., N.Y. 10024

Soviet Physics–JETP is a monthly journal published by the American Institute of Physics and contains a complete translation of the *Journal of Experimental and Theoretical Physics* of the U.S.S.R. Academy of Sciences.

This translating and publishing project was undertaken by the institute in the conviction that dissemination of the results of researches everywhere in the world is invaluable to the advancement of science. The U.S. National Science Foundation encouraged the project initially and supplied partial financial support on a declining scale until the AIP translation program became self-supporting in July 1964.

The American Institute of Physics and its translators propose to translate faithfully all the material appearing in the original articles. The views expressed in the translations are therefore those of the original authors, and not those of the translators nor of the American Institute of Physics.

Volume 1 of *Soviet Physics–JETP* corresponds to Russian Volume 28 (1955). Two volumes are published annually, each of six issues. Each volume contains the translation of one volume of the *Journal of Experimental and Theoretical Physics.*

Beginning with Vol. 9 (36), the transliteration of the names of Russian authors follows British Standard 2979, which is being adopted by a large number of scientific journals in the United States. The Library of Congress transliteration is followed in the earlier volumes.

ERRATUM

Article by A. Ya. Shul'man and Sh. M. Kogan, "Contribution to the Theory of Fluctuation in a Nonequilibrium Electron Gas. II. Spatially-inhomogeneous Fluctuations" (Vol. 30, p. 1146, 1970).

In formula (1.9) for the spectral density of the fluctuations of the extraneous currents, the second term in the curly brackets should read

$$\frac{(\omega - \mathbf{ku})(u_\alpha D_{\beta\gamma} + u_\beta D_{\alpha\gamma}) k_\gamma + k_\gamma D_{\gamma\gamma'} k_{\gamma'} (u_\alpha u_\beta - D_{\alpha\gamma} D_{\beta\gamma'} k_\gamma k_{\gamma'})}{(\omega - \mathbf{ku})^2 + (k_\gamma D_{\gamma\gamma'} k_{\gamma'})^2}.$$
